

### Transition Matrix

*Smoker Controls to COPD Patients*

Figure 2 is a scatter plot showing the distribution of standardized dTFI values for 100 transcription factors. The y-axis is labeled 'Standardized dTFI' and ranges from -2.5 to 10.0. The x-axis is labeled 'Transcription Factors' and lists 100 transcription factors. For each transcription factor, there are blue dots representing 'Null' values and a red dot representing the 'Observed' value. A red line connects all observed values, showing a general downward trend from left to right.
